SUMMARY

Data Science student at UC Berkeley with experience in data analytics and backend systems. Skilled in Python and SQL, with hands-on experience building data pipelines, performing EDA, and generating actionable insights from real-world operational and customer datasets.

EDUCATION

University of California, Berkeley

Berkeley, CA

Bachelor of Arts in Data Science

GPA: 4.0

- Domain: Business and Industrial Analytics
- Honors: Dean's List (College of Computing, Data Science, and Society)
- Relevant Coursework: Data Structures, Principles of Data Science, Data Engineering, Decision Analytics, Machine Learning, Probability and Statistics, Computer Security

EXPERIENCE

Data Analyst – Commercial Real Estate Operations

May 2024 – Present

Property Plus Management

Los Angeles

- Performed EDA and data preprocessing on 2000+ maintenance records using Python, computing vendor cost, job frequency, and property spend, improving cost visibility by 60%
- Analyzed vendor-level spending patterns to detect cost anomalies, flagging top 5–10% high-cost vendors and reducing potential overspending by 15%
- Built visualizations with Matplotlib and Seaborn to analyze repair types and vendor performance, surfacing 3+ major cost drivers (AC, plumbing, pest) and accelerating decision-making speed by 30%

Software Engineering Intern

September 2025 – December 2025

Zoofi Inc

Sunnyvale, CA

- Built a FastAPI backend in Python to ingest and process customer data from Firebase, structuring personal and financial records into queryable datasets and reducing manual reporting time by 60%
- Developed an automated data summarization pipeline using Python and Google ADK, transforming raw customer data into structured insights and accelerating product decision-making

PROJECTS

Housing Price Prediction Model | *Python, pandas, NumPy, scikit-learn, Matplotlib, Seaborn*

- Performed EDA on 200K+ housing records with 60+ features, applying log transformations and outlier removal to address skewed distributions and improve data quality
- Engineered features through a structured data processing pipeline (e.g., extracting bathrooms from text, log-transformed square footage) to create model-ready datasets
- Built and evaluated linear regression models using scikit-learn, implementing train-validation splits and k-fold cross-validation to optimize performance and reduce RMSE

Secure File Storage System | *Go*

- Designed and implemented a secure file storage and sharing system using Go, supporting user authentication, encrypted storage, and controlled file access
- Applied cryptographic primitives (encryption, HMAC, public-key cryptography) to ensure data confidentiality, integrity, and secure key management
- Built access control mechanisms for file sharing and revocation, preventing unauthorized access and maintaining consistency across distributed data structures

TECHNICAL SKILLS

Languages: Python, C++, Java, Javascript, Go, SQL

Frameworks: FastAPI, React, TensorFlow, PyTorch

Libraries: pandas, NumPy, Matplotlib, Seaborn, scikit-learn, SFML

Developer Tools: Git, VS Code, Jupyter Notebook, PostgreSQL, MySQL, Firebase, Tableau, Excel
